Front End Technologies   JavaScript   Duration: 1 Day

JavaScript Events

1. Add an event listener to a button. When we click on it should display current date and time.

2. Show the javascript validation. When you click submit, the text box doesn't need to be empty.

3. How console.log() can be used for Debugging.

4. Write functions to set a cookie, get a cookie and check a cookie in a single program.

5. Create a JSON object and access it using dot notation.

Things to know:

1. Debugging in JavaScript.

2. What are Cookies?
